

Looking for a shortcut to make education & career plans?

Aptitude + Interest + Personality = Career Success. *American School Counselor Association*

Career Vision can cut through the confusion, offering you an opportunity to conduct a targeted exploration of options to build future career plans based on **the most critical information needed to make informed decisions.**

There is a SCIENCE and an ART to effective career planning.

The SCIENCE. Career Vision / Ball Foundation is a research and consulting organization that has been studying aptitudes for over 30 years, developing strategies to identify one's natural abilities and the best work environments to engage them. Self-knowledge guides you where your talents will be needed.

The ART. Your professional consultant explains where and how your talents can be developed and the careers you could consider. We teach a process you can use now and through your career. With this knowledge comes the ability to make best choices, instilling confidence and motivation. **For us, It's PERSONAL.** You matter. Career Vision's professionals have been working with generations of families, helping them discover their unique strengths and understand each other in the process. Parents are included as valued partners in the consultations. We work with clients over their lifetime and encourage talking to their consultant when questions arise later. **Our goal is their success!**

Our programs are designed for convenience and can be done in our office, or online at home. We present goals for work that can be satisfying and that can contribute to their success. By identifying our aptitudes and where we perform our best, we can select majors, and explore career choices with confidence.

Our website for young adults <https://careervision.org/career-plan-students/> explains the two programs we offer:

- **Career Readiness** is for families of high school and post high school students.
- **Career Launch** is for college graduates who are frustrated with what they are doing or are concerned about their transition from school to work.

We hope to hear from you!
